

NAME

ldrxboot — load floppy disk second level boot

SYNOPSIS

/etc/ldrxboot [0][1] /etc/rxboot2

DESCRIPTION

This program is used to load the second level floppy bootstrap into floppy blocks 0 (minor blocks 1 - 3) and 500 (minor blocks 0 - 1). The first level bootstrap is located in rxboot.s (/etc/rxboot). The second level bootstrap is uboot.s with the rx flag set and is usually kept in /etc/rxboot2.

FILES

/etc/rxboot
/etc/rxboot2
