

NAME

`tk` — paginator for the Tektronix 4014

SYNOPSIS

`tk` [`-t`] [`-N`] [`-pL`] [`name`]

DESCRIPTION

The output of `tk` is intended for a Tektronix 4014 terminal. `Tk` arranges for 66 lines to fit on the screen, divides the screen into `N` columns, and contributes an eight space page offset in the single-column case. Tabs, spaces, and backspaces are collected and plotted when necessary. Teletype Model 37 half- and reverse-line sequences are interpreted and plotted. At the end of each page `tk` waits for a newline (empty line) from the keyboard before continuing on to the next page. In this wait state, the command `!line` will send `line` to the shell.

The command line options are:

- `-t` Don't wait between pages; for directing output into a file.
- `-N` Divide the screen into `N` columns and wait after the last column.
- `-pL` Set page length to `L`. `L` accepts the scale factors `i` (inches), and `l` (lines); default is lines.
